Attention:

After printing the ink must be thoroughly dry as solvent residues diffuse the film and damage the adhesive or can lead to bubbles and to the removal of the laminating films. Surfaces to which the material will be applied must be thoroughly free of dust, grease or other contaminations that could affect the adhesion of the material. Freshly lacquered or painted surfaces should be allowed to stand for at least three weeks after complete curing. The compatibility of selected lacquers and paints should be tested by the user, prior to application of the material.
